

An identification card for the graduation project for year 2025-2026

Project title: UPPLY

<u>The project</u>	
Project Idea	The AI-Powered Job Portal connects Job Seekers and Recruiters through a smart, automated platform. Seekers can create profiles, explore tailored jobs, and apply instantly using auto-filled applications. Recruiters can post jobs, manage applicants, and leverage AI-based rankings and AI interviews to identify top candidates efficiently. The system streamlines the entire hiring process — making recruitment faster, smarter, and more .effective for everyone
The aim of the project	To create an AI-powered job portal that revolutionizes recruitment by matching candidates with jobs intelligently and conducting automated AI interviews — .making hiring faster, smarter, and more accurate

Software and technologies used	AI: Ollama, OpenAI models, Hugging face, SpringAI Back-end: spring boot, MySQL, Docker, GitHub Actions Front-end: React.js Mobile application: Flutter
Project field and target group	focusing on intelligent recruitment systems and automation in job matching and evaluation. Target Group -Job Seekers looking for opportunities that match their skills and experience - Recruiters & Organizations aiming to streamline hiring through AI-based candidate matching and automated interviews.
